Knowledge-Building Analytics: Quantitative Ethnography of Knowledge-Building Practices

Jun Oshima

Room: [35-01-06](#)

The knowledge-building theory is a new theory of learning founded on perspectives of knowledge-creation that emphasizes the collective nature of knowledge in the community. Traditional analytics approaches may not always be appropriate to evaluate learner practices. This talk will introduce socio-semantic network analysis of discourse to grasp how learners engage in their collective idea improvement, and the Knowledge-Building Discourse Explorer software application to visualize temporal word networks. The talk will also address recent innovations in knowledge-building analytics by integrating socio-semantic network and epistemic network analysis.
